1. Things That Went Well

Our group meeting started on time, but only two people attended the meeting. The project will go ahead anyway. Firstly, we focused on the key items on the to-do list, and as the number of people declined, we reduced the project functionality accordingly. Secondly, we communicated with the tutor, pointed out the problems and Suggestions in Milestone 1, and summarized the areas that needed improvement. Once again, let's focus on the key items on our to-do list, the three simplest features we have to make sure they get done on time. Our Milestone 2 project meeting is to solve the problems we found in milestone 1 notes.

2. Things That Could Have Gone Better

Due to a code failure in Milestone 1, we started writing code again in this assignment, so we are behind schedule. For some reason, another member of the team was missing. Andy said that he had an urgent matter to deal with, and then he never attended or replied. We completed the registration and login process on the back end before Tuesday, but there were problems with the connection on the front end.

3. Things That Surprised Us

We were surprised to see the results of the database presented in Navicat. We record employee and user registrations separately in the database. Complete unit tests to add, remove and find.

4. Lessons Learned

We have a better understanding of how many story points we can complete in any given sprint. Given that neither of us had any experience with a database, we should write other important parts of the site first and then go back to the database in the sprint. And we'll start learning about react in the course.

5. Final Thoughts

Things to keep:

We should certainly continue to focus on the number of story points we can accomplish and learn more about each other's capabilities.

Thing to change:

We need to better comment on how our tests are conducted and be more specific about how our completed backlog items implement their "completion definitions."

There are only 2 people left, which makes us under great pressure. I am not sure how many parts we can do, but we also need to adjust our mentality and work hard!
