Project Sprint Planning Notes

Team: GoBooking

Sprint: Sprint 2

Date: 11/Sep 2020

Attended:All

Scrum Master: Andy Chung

Product Owner: Yue Sun

Development team: Andy Chung, Yue Sun, and Sai Yang.

1. Goal

In this sprint, we aim to set up and host a basic website with minimal functionality to build the rest of the project upon and set up a database for items in the menu.

2. Duration of the sprint

The sprint will take place over 10 days from 11/09 - 21/09.

3. What is the team's vision for this sprint?

ID	User story
1	As a customer, I want to create an account, so that I can login.
2	As an admin user, I want to create an account, so that I can organise internal data.
3	As a worker, I want to create an account, so that I can login and see my dashboard.

1-3 items in the product backlog will be used for sprint 2, because 1-3 covers items and the most basic functions of the webpage. For example, registration and login functions for users, employees, and administrators. Realizing these projects will help us to carry out sprint 3. Based on sprint 2, the potential product to be delivered is a website with a user registration and login interface and a back-end database for storing user information. Regarding the functions implemented in the sprint2 phase, the product will implement user login and registration functions and users save personal information.

4. Estimation in story points

ID	User story	Story points
1	As a customer, I want to create an account, so that I can login.	8
2	As an admin user, I want to create an account, so that I can organise internal data.	8
3	As a worker, I want to create an account, so that I can login and see my dashboard.	8

The goals of items 1, 2 and 3 are to realize the user registration and login functions of the web page, so we assigned the same story points to these three projects. We have all assigned 8 story points to these three projects. This is because the login and registration functions need to use code, build a database, design a front-end web page and combine the code with the web page. In addition, after the user is successfully registered, the system needs to record the user information in the database. This may cost us a lot of time and energy. This is why items 1, 2, and 3 are allocated 8 story points.
